

DocBridge[®] Pilot

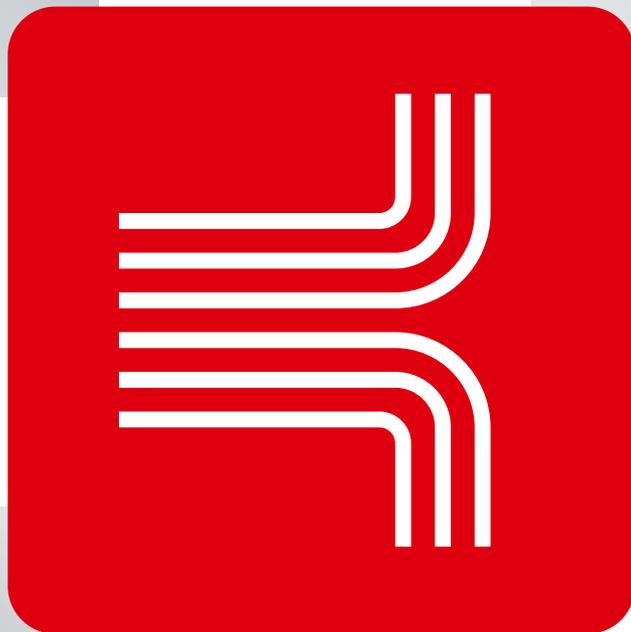

Output Management with Flexible Mailing Pool

Functions

- Postage optimization
- IT franking
- Insert management
- Mail tracking

Benefits

- All formats
- Mail bundling
- Configuration interface
- Comprehensive optimization
- Multi-client capability

In many companies, output management is often a collection of different applications which create, modify and convert documents, optimize mailing and prepare the documents for the various output channels. These applications operate on different platforms and create documents and data streams in different formats which are difficult to gather together. In an ideal case, this would be possible using one software. **The ideal case is DocBridge Pilot.**

What is DocBridge Pilot?

The diverse range of new applications used to produce documents often puts a strain on the infrastructure which has developed within companies, as these applications run on different platforms and produce documents and data streams in different formats that are difficult to consolidate. This uses up resources, is inflexible and results in high costs because, for instance, several documents to the same recipient are not sent in one envelope or inserts cannot be included dynamically.

DocBridge Pilot covers these many demands as a central solution which is platform-independent: it enables the decoupling of incoming data streams and outgoing mail using its database-based mailing pool, provides high flexibility and variability in the preparation of the mailings and can also be used for outgoing channels such as web portals, email and E-Mail letter in addition to classic printing.

The DocBridge Pilot Concept

In DocBridge Pilot, the importing of incoming documents and the issue of mail are decoupled from each other: the incoming documents to be processed are analyzed and all criteria relevant to their further processing is extracted in the form of metadata, such as the content of NOPs and TLEs in AFP data streams or page content such as OMR, barcodes or text. While DocBridge Pilot saves the documents in a central mailing pool, the metadata is stored in a relational database. With a printer driver implemented for the clients in specialist departments, users are able to save their Office documents in the same mailing pool and process them centrally.

For each job, a series of functions can be configured to prepare the mailing, such as sorting and inserting the documents in the required output format and enriching pages with additional information such as DataMatrix codes, OMR marks, logos and advertisements in free page areas.

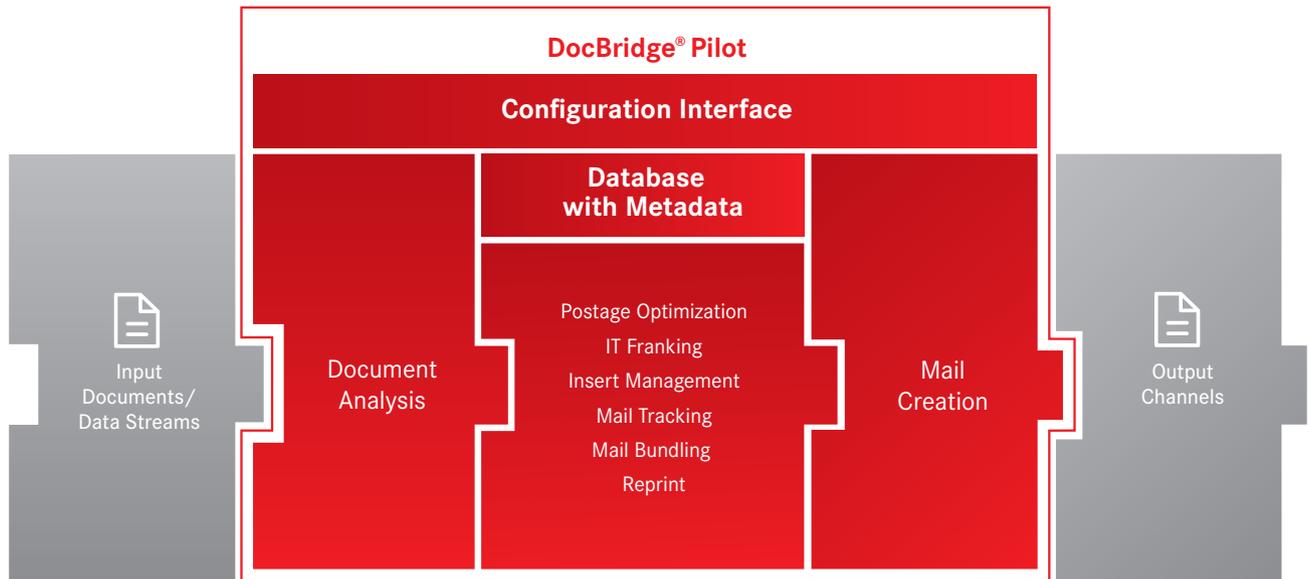

Depending on the configuration, all further preparation steps can be carried out completely automatically or initiated by an administrator at any time. For example, the administrator can bundle

together documents from different sources and of various formats in the mailing pool and collect mailings according to required criteria as a job and optimize them for dispatch.

The way in which the incoming documents of a specific document type are to be processed can be configured and the final result can be viewed using a graphic interface. These configurations can be versioned, so it is possible to reset them to a previous status and apply this configuration status to the production process in a targeted way.

As DocBridge Pilot is multi-channel capable, all required output channels can be served, such as central or distributed printing, email, archive or web portal.

Control and Optimize All Your Output

Application Scenario 1

The Aim

A customer mailing has been produced and is available as an AFP print spool. Using the “zip code” criterion, a specific insert needs to be dynamically added when putting the letters into envelopes.

The Solution

DocBridge Pilot searches the AFP data stream and adds the required insert for all recipients whose zip code corresponds to a defined criterion.

Resulting Benefits

- Optimized customer communication through efficient customer mailings
- Flexible production management
- Complete process management
- Reduction of costs by mailing optimization and computer postage

Application Scenario 2

The Aim

Information needs to be gathered from various systems, sorted and issued using various output channels such as the post, PDF as an email attachment and as PDF/A for archiving.

The Solution

DocBridge Pilot separates the input and output processing and can collect data using the integrated database, sort this data and provide it for all output channels.

Resulting Benefits

- Mixture and conversion of different data streams and formats
- Bundling of mail, including incoming documents of different types
- Easy mail tracking and reprints

Supported Formats

- PDF
- AFP
- Metacode
- LCDS
- PCL
- PostScript
- SAP
- PPML
- VIPP
- VPS
- Linemode
- Prescribe
- XPS
- XSL-FO
- Raster
- SVG

Why Compарт?

In enterprise document and output management, Compарт delivers one of the most comprehensive solution offerings in the world.

Compарт develops all its core technology natively, ensuring operational reliability and single source accountability.

Over the course of more than 2 decades, Compарт has developed comprehensive expertise to help our 1,400 customers throughout the world find the most efficient solution for their output management requirements.

Compart®

Document & Content Technology Solutions

About Compart

Compart is a leading global provider of Multi-Channel Document Management Solutions. Headquartered in Germany, with subsidiaries throughout Europe and America and served by a partner network in Latin America, for over two decades Compart has consistently helped businesses improve operational efficiency with fast and flexible processing of high-volume data and document flow.

Compart's scalable and platform-independent DocBridge® software - designed, built and supported by Compart - delivers bespoke output, on paper or digitally, anytime and anywhere they are required.

Compart is recognized as an industry leader in driving innovation and delivering world class solutions. With in excess of 1,400 clients in over 45 countries across the banking, insurance, retail, print services, utilities and telecommunications industries, Compart is also chosen as an exclusive technology provider by leading vendors in the industry.
